A study of the design factors that affect the skill required to land a conventional atrafene. Coming at a time when interest is centered on airplanes for private owner use, Professor Koppen's analysis of what makes one plane corier to land then another points a way toward the solution of one of the designers' most critical problems-control during landings.

DEPENDABLE operation of navi-gation instruments and prevention of ice formation on wings and control surfaces are vital to safe, "on schedule" air travel. Both these important requisites are supplied by Eclipse. A complete line of vacuum instrument pumps in various capacities, suction regulating valves and check valves have been developed, as well as the mechanical units for operation of the Goodrich de-icer shoes. Detailed information on request.

ECLIPSE AVIATION CORPORATION
